

THE ORAL DEFENSE & RELEASE VERDICT QUALIFICATION GATE

Auditing the 11-artifact Cumulative Design Dossier across 4 review personas for a binding release verdict

1. EMBEDDED & SILICON LEAD STATUS: SIGNED ✓ BBB = 24.2 ms: Bounded - Zero dynamic memory allocation. - Watchdog countdown < 50 ms. - FreeRTOS 1 kHz deterministic tick. - PTP Exposure midpoint skew < 5 μs.	2. EMBODIED ML SPECIALIST STATUS: SIGNED ✓ Max RF Signal: 0.1 mV Zero Causal Collapse - Bounded KV-cache memory. - Governed episode failure slicing. - C^2 quintic polynomial spline blend. - Expiring Intent lease TTL (500 ms).	3. SYSTEM SAFETY LEAD STATUS: SIGNED ✓ GBF forward invariance $h(x) \geq 0$. 0 Physical Breaches - Complete STPA hazard matrix. 5,000 seeded fault injection runs. - IEC 60204-1 Cat 0/1/2 fallback. - Dynamic stopping $d_{stop} \leq d_{clear}$.	4. PRACTITIONER UX LEAD STATUS: SIGNED ✓ Clear unambiguous C contracts. 100% Bench Reproducible - Complete diagnostic logs. - Zero undocumented magic numbers. - Manageable 6 ECTS workload. - Reproducible bench realization.
★ VERDICT 1: DEPLOY Full ODD Release Authorized - Unanimous 4-expert approval. 100% fault containment verified. - Passes all 4 qualification rungs. RESULT: Production Shipment	⚠ VERDICT 2: CONDITION Restricted ODD Operation - Requires secondary audit within 30d. - Human co-pilot required ($\alpha \leq 0.5$). - Speed derated to 0.5 m/s. RESULT: Supervised Pilot	✖ VERDICT 3: REFUSE Shipment Blocked - Missing empirical bench proofs. - Fault injection boundary breach. - Tail latency exceeds τ_{world}. RESULT: Redesign Required
