

THE PHYSICAL AI SCOPE TEST: TRIPARTITE ARCHITECTURAL CRITERION

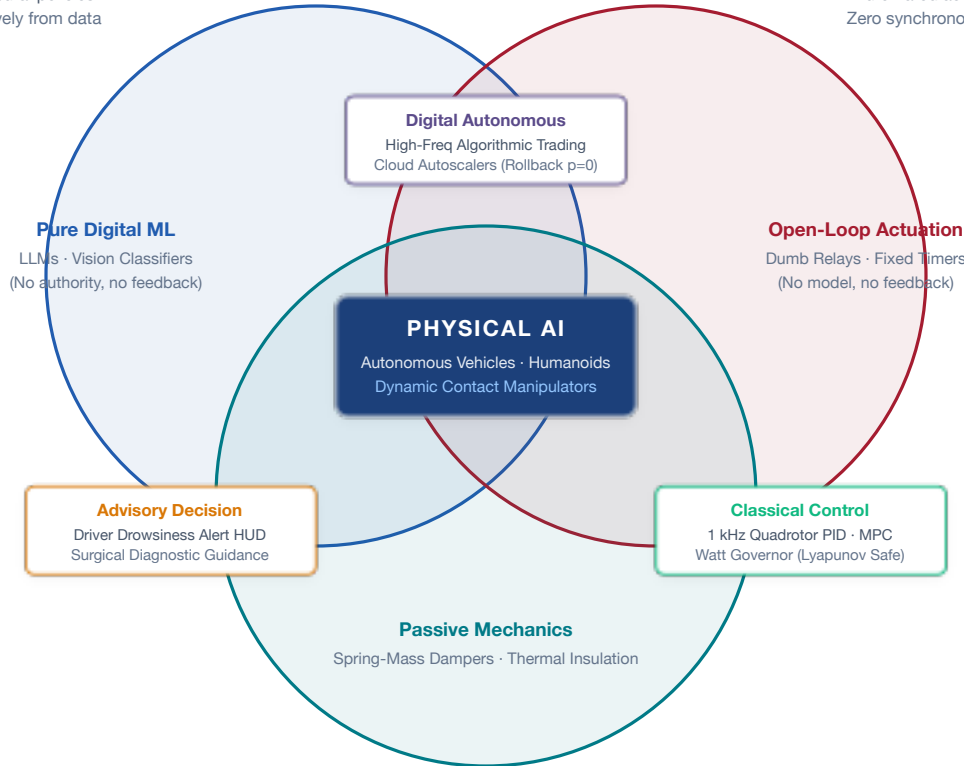

Physical AI exists strictly at the three-way intersection of Learned Policies, Consequential Feedback, and Delegated Authority

CRITERION 1: LEARNED MODELS

Unspecifiable neural policies
Acquired inductively from data

CRITERION 2: DELEGATED AUTHORITY

Automated actuator register writes
Zero synchronous human in the loop

CRITERION 3: CONSEQUENTIAL PHYSICAL FEEDBACK

Actions alter external world state ($s_{t+1} \sim P(s|s_t, a_t)$) under mechanics, momentum ($p=mv$), and thermodynamics
