

THE PATTERSON ROOFLINE MODEL & EMBODIED MEMORY WALL

Operational Arithmetic Intensity (FLOP/Byte) vs. Attainable Throughput on Embedded Edge Silicon (NVIDIA Jetson AGX Orin, 204.8 GB/s LPDDR5)

The Patterson Roofline Law for Physical AI: Single-step foundation model evaluation is memory-wall bound ($I \approx 1$). Action chunking amortizes DRAM sweeps ($I \geq 50$), escaping the memory wall to feed real-time reflexes.
